Adver-Teaser™

Coaster Call®

Onsite pagers are used in healthcare facilities across the nation to streamline patient flow, improve service and eliminate overhead paging.

Our systems are durable, flexible, and economical. A typical system consists of a transmitter and multiple pagers. When a patient arrives, they are given a pager. When they need to be reached or directed to a specific area, their pager number is entered into the transmitter and they are notified.

For hospital ER applications, we recommend the AdverTeaser which features lighted messaging to silently direct patients to proper areas and a clear paddle in which a business card sized insert with pertinent instructions or information may be placed. (See Illustration) Inserts can be color coded for seriousness of patient condition - Red for Critical, Yellow for Serious, Green for Non-Critical.

Pagers:

- Adver-Teaser™**
- For ER, it can provide a checklist to waiting patients for information that will be required
 - Insert cards may be color coded to correspond to severity of patient condition
 - Call waiting patients to various stations using the lights on the pager
 - Standard business-card-size insert area
 - Vibration, flash, beep, or flash/beep alert modes

- Coaster Call®**
- This is the lighted pager found in many restaurants
 - Ideal for OR or family paging

- Trinity System**
- Call waiting families on their own cell phone or LRS pager
 - Works with both styles of pager shown above

All LRS Pagers Offer

- Up to 2 mile range
- Up to 48 hours of battery life on a single charge
- Range test capability
- Custom labels (optional)

★ Anti-Theft and Out-of-Range indicator helps minimize losses

Please have the following information ready:

- Identification
- Insurance Card
- Allergies

When paged, please report to the correct station:

Light 1 = Triage
Light 2 = Registration
Light 3 = Bloodwork
Light 4 = Bed Ready

○ 1. Triage

○ 2. Registration

○ 3. Bloodwork

○ 4. Bed Ready
